Point of discussion

Group 1: Interoperability of Social ID Cards: Benefits and Technical-Legal Challenges

- What are the key benefits of achieving interoperability among social ID card systems across the EU?
- Identify and discuss the primary legal barriers that currently hinder the interoperability of social ID cards.
- How can stakeholders collaboratively overcome these challenges? Are there successful examples or models from other sectors or regions that can be adapted?

Group 2: Technical Adjustments to Facilitate Cards Production and Interoperability

- What specific technical adjustments are needed to standardise social ID card production across the EU?
- How can technology be better utilised to ensure that these cards are both secure and interoperable?
- Discuss the potential role of emerging technologies (e.g., blockchain, AI) in enhancing the production and functionality of social ID cards.
- What are the implications of these technical adjustments for the daily operations of workers and employers in the construction sector?

Group 3: Focus on Political Aspects for Interoperability

- What political support is necessary to advance the agenda of interoperable social ID cards across the EU?
- Identify the key policy makers and influencers who could drive the adoption of a unified framework for social ID cards.
- Discuss the potential impact of EU-wide elections or political shifts on the progress towards interoperable social ID systems.
- How can advocacy and dialogue between different political entities and social partners be structured to support this initiative?
